ETHEREUM ECOSYSTEM GRANT · APPLICATION

21

The number is the PR.
The quest is the product.

Anyone can chalk 21 on asphalt, spray it on a wall, or stencil it next to a broken lift. Under the mark runs a board where a person asks for what they need — a tutor, a plumber, a psychologist — offers arrive, the work happens, escrow pays.

THE FLOOR	ABOVE IT	FOR CODE
€7,500	Same split	250 ₹/h
the smallest round that moves	45 / 15 / 15, at any size	my wage, 960 hours

NO TOKEN · NO LOGO · MIT KIT

The city can see the problem. So can the neighbour who could fix it.

Two failures, one missing layer: nothing turns a need into a bounded, paid, verifiable job.

01

Reports end in a ticket.

A photo to a hotline returns a case number, not a budget. Nobody learns who decided, who was paid, or what happened next. A street rebuild goes the other way: one big contract, a hoarding, no timeline.

02

Helpful neighbours live in DMs.

A tutor hour, a bike repair, an hour with a psychologist: people find each other in group chats, pay cash, cancel twice — and nothing is recorded.

03

Supply stays invisible until hired.

The person who could do the work never sees the need; the person with the need never sees the price. An agency or an ad sits in between.

PHOTO: A RESIDENT'S PHONE

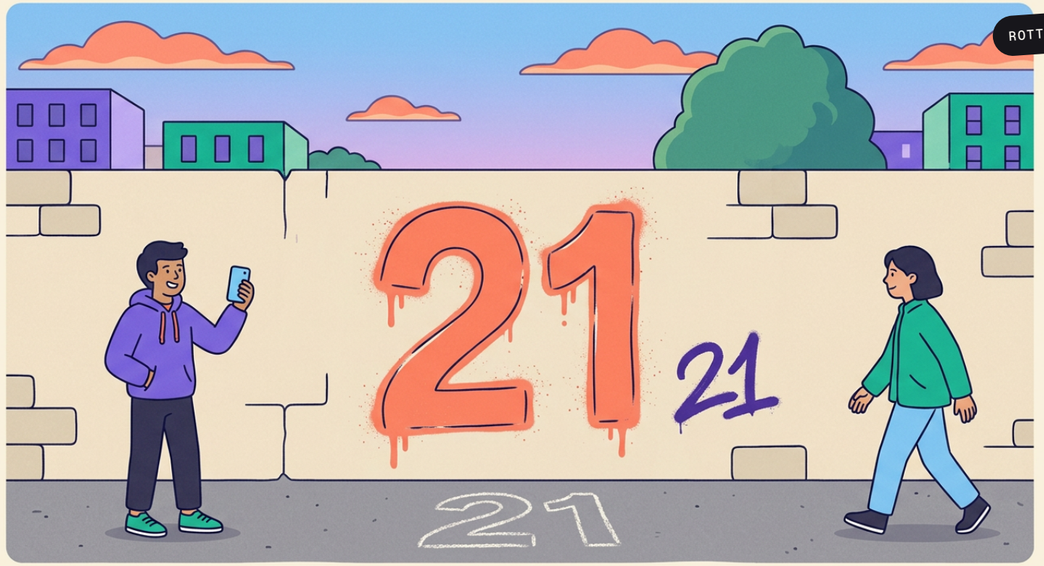

CHALKED 21 · OOSTERPARK · DAY 91

WHAT IS MISSING

A bounded ask. Public offers. Escrow. A receipt.

Not a campaign. A number anyone can paint.

A slogan needs translation, a logo needs a licence, a brand needs a budget. Two digits need none of that — and they say which era you belong to: the one where the person next to the problem can fix it.

Unbannable, unownable

You cannot confiscate a number or copyright two digits. Nobody has to ask us for permission, and we cannot sell the right to use it.

Amateur is the format

Chalk on asphalt, a marker on a lift door, a sticker on a broken bench, a five-second TikTok of the spray. Polish would kill it: the point is that it looks made by a person.

Every mark is a link

The number points at the board under it — a quest, a reward, an escrow, a receipt. The paint is the ad; the finished work is the proof.

THE NUMBER IS THE ONLY BRIEF

No tagline. No mascot. No translation.

WHERE OUR MONEY GOES — AND DOESN'T

We pay for consented walls, artists, photographers and the kit. We never pay for illegal paint, and we never instruct anyone to break a rule. The mark travels without us — that is the point of choosing a number.

STENCIL STICKER CHALK

no permission needed

A number on the thing that is broken.

A bench, a pothole, a lift, an overflowing bin: the mark turns a public eyesore into an address. Two digits, one task page, and a photo anyone can retake.

CHALK · OOSTERPARK

MARKER · LIFT 2

STICKER · TRAM STOP

A MARK IS A HYPERLINK

21 + the place = a task page. The page holds the ask, the offers, the money and the before/after. Reading it needs no app, no account, no permission.

- Anyone can open the task behind a mark — and become the asker.
- If the thing gets fixed, the mark is crossed out and stays in the record.
- If it never gets fixed, the page shows how long it has been waiting.

TASK · 21/A1142

Bench, slats broken

asked by a resident · 4 offers · escrow funded

€420

OPEN · DAY 6

deadline 22 oct

Supply does not show up. Demand does.

21 is a board, not a catalogue: someone posts what they need, offers arrive, the asker picks. No agency, no dispatch algorithm, no ranking for sale.

01 Ask

One paragraph, a reward ceiling and a deadline. Two minutes, no CV.

02 Offers arrive

Named people with a price, a time and a track record. Three offers is normal; one is enough.

03 Choose

The asker decides. Offers appear in the order they came in — never boosted, never ranked by spend.

04 Do the work

Online or in the street. The reward is already in escrow, so nobody works on a promise.

05 Confirm

Both sides confirm; escrow releases; the record stays. 72 hours to raise a dispute.

FOUR RULES, NO EXCEPTIONS

A medium unit
one hour, one session, one visit. Big projects are split.

No cash off-platform
if it leaves escrow, it leaves the record.

No paid placement
no promoted offers, no bought reviews.

Reputation is earned
per finished quest, and cannot be bought.

Bounded, priced, provable.

A quest is the smallest unit of work two strangers can trust. Everything the exchange needs fits on one card.

01

The ask

Plain language, 400 characters. What, where, when — not a job description copied from a portal.

02

Scope per quest

One hour, one session, one visit, one small fix. A big project is split, never swallowed.

03

Reward

A fixed amount, funded into escrow before the first offer is even shown.

04

Deadline

A date and an hour. Not “soon”, not “flexible”, not “ASAP”.

05

Proof

Both sides confirm and attach a note or a photo. Silence is not consent.

06

Who may answer

Anyone with a profile. ID check above €50, category checks where the law asks.

WHY MEDIUM COMPLEXITY

Low enough to finish in an afternoon, high enough that reputation matters: tutoring, translation, bike repair, hairdressing, supervised psychology, handyman, CV review, moving a sofa.

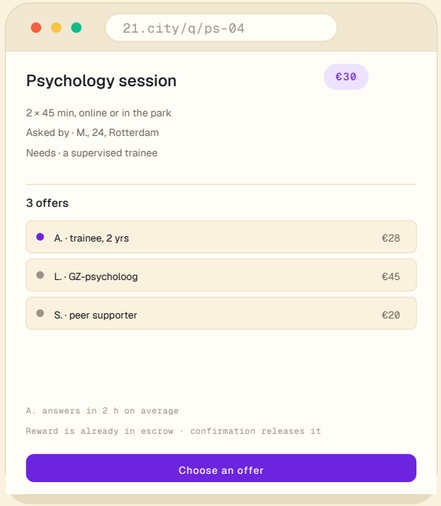

WHY NOT A GIG APP

No dispatch algorithm deciding who eats, no commission taken from the worker before the work exists, no rating that punishes turning a shift down. The ask is public; the answer is a person.

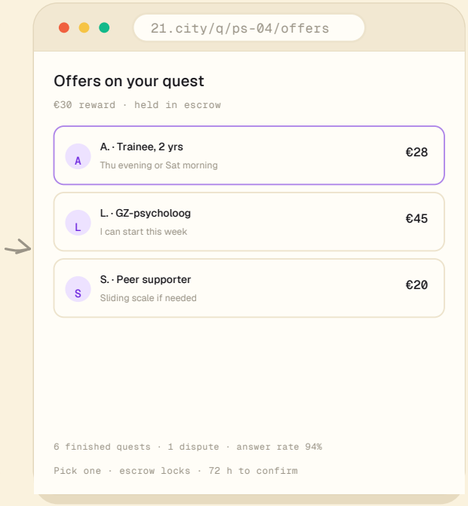

A psychology session. Nine days, no invoice.

Demo scenario from the product spec. Amounts, names and dates are illustrative, not reported results.

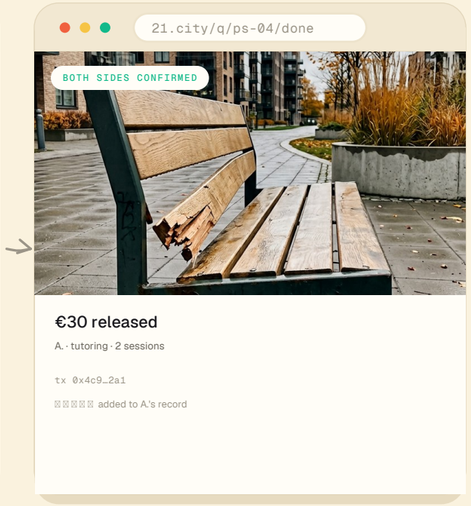

THE ASK

THE OFFERS

DONE

The asker is M., 24, Rotterdam. The provider is A., a supervised trainee. €30 sits in escrow from hour one.

Both screens are the same page, one tap apart — nothing to install.

QUEST LEDGER · PUBLIC BY DEFAULT

Day 0	Quest posted	€30 ceiling
Day 0	Reward funded	€30 in escrow
Day 1	3 offers	€20 - €45
Day 2	Offer chosen	A., trainee
Day 4	Session 1	45 min, online
Day 7	Session 2	45 min, the park
Day 8	Both confirmed	nothing disputed
Day 9	Escrow released	€30 + record

WHY THIS QUEST, AND NOT A SEARCH ENGINE

The reward is visible, the offers are named, and the money is already held.

Three people replied in 19 hours. Nobody paid for placement.

WHAT A. KEEPS

A public record of work done — not a five-star average that punishes a bad week.

21.city/q/ps-04

Settlement in seconds. No invoice, no 30-day terms.

07 — TRUST, WITHOUT A BOSS

Money waits. Then it moves.

Escrow is the only reason two strangers meet. No company account holds the reward: one contract per quest, released by rules pinned before the ask is funded.

01 Funded before offers

A quest cannot collect offers until the reward is in escrow. No maybes, no invoice afterwards.

02 Two-sided confirmation

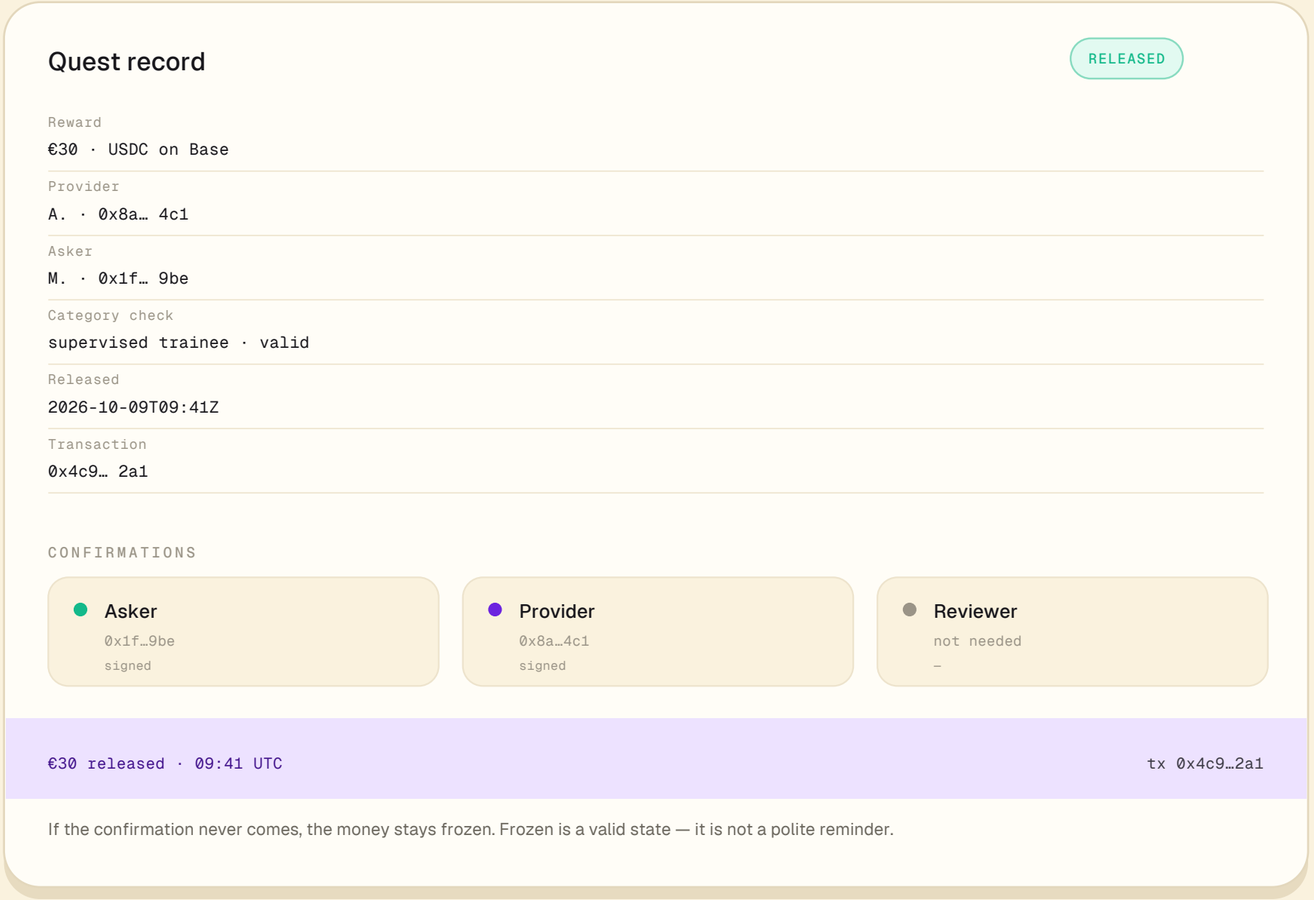

The asker confirms the work; the provider confirms the handover. Silence is not consent: 72 hours, then a reviewer steps in.

03 Dispute, not drama

A dispute freezes the release and opens a three-step panel: evidence, a call, a decision. Both sides stay on the record.

04 Safety is a product rule

Public first meetings, no cash off-platform, no medical claims, ID above €50, and a one-tap report that pauses a profile.

08 — THE SAME MACHINERY, IN PUBLIC SPACE

A bench in Oosterpark. Nine days, start to receipt.

The same ask, offers and escrow — with the city as one of the askers and a repair as the deliverable.
This is the layer the number sits on.

DAY 0 · CHALKED BY A RESIDENT

DAY 9 · FIXED AND ATTESTED

Same escrow, same proof, same receipt.

The only difference is who answers.

TASK LEDGER · PUBLIC BY DEFAULT

Day 0	Task published	€420 target
Day 1	3 bids received	€380 - €455
Day 3	84 residents voted	62% Groenwerk
Day 4	Escrow funded	€420 in USDC
Day 7	Milestone evidence	6 photos + GPS
Day 9	Dual attestation	payment released

WHAT THE RESIDENT KEEPS

A public URL with the history, the contractor's name and the final payment.

21.city/t/oosterpark-bench

Paid by neighbours, a city budget or a matching pool — the quest does not care.

09 — ONE PROTOCOL, TWO DOORS

A quest for a person. A task for a street.

Both are the same object: a bounded ask with a reward and a proof. Only the payer and the verifier change.

SAME OBJECT, TWO DOORS	PERSONAL QUEST	CIVIC TASK
Payer	The asker, or a funder buying rewards in bulk	Neighbours, a city budget, a matching pool
Verifier	Both sides confirm, then a reviewer on dispute	Resident attestor + city partner + 72 h window
Proof	A note or a photo, attached to the record	Signed capture, geofence, before and after
Where	Online, or anywhere in the city	Public space only, with owner consent
Cap	One session, one visit, one small fix	A per-task cap set by whoever funds it
Dispute	Panel: evidence, call, decision	Same panel, plus a staked challenge window

ON-CHAIN

`reward · selection · confirmation · payment · reputation`

No custody: every reward sits in its own contract.

OFF-CHAIN

`names · addresses · session notes · photos`

Hashes on-chain. Personal data deletable on request.

A bench. A street. A whole construction site.

The unit stays medium; the project does not. A city problem or a building site is published as a project page — budget, milestones, open tender — and paid out in quest-sized pieces, each with its own proof.

01 Quest
One person, one hour.

A tutor, a psychologist, a handyman. Payer: a neighbour.

02 Civic task
One object, one fix.

A bench, a bike rack, a pothole. Payer: neighbours or a city budget.

03 Project
One block, one build.

A street, a school roof, a construction site. Payer: a city, a developer, a housing corporation.

21.city/p/oosterpark-oost

PUBLIC PROJECT · STREET REBUILD

OPEN TENDER

Oosterpark Oost, Amsterdam

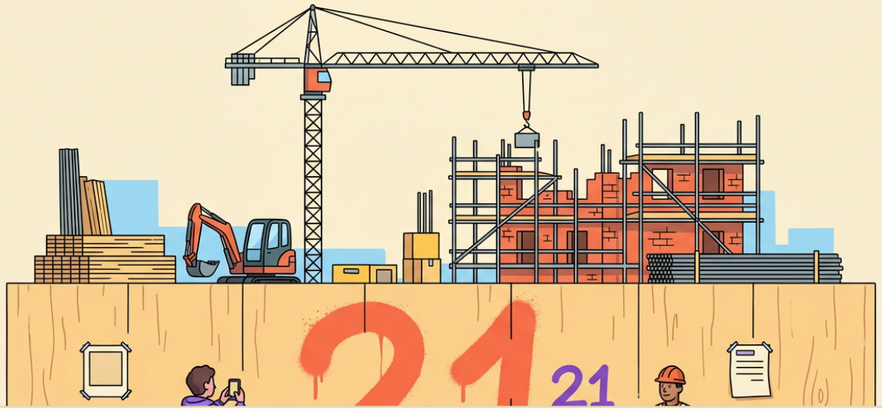

Stadsdeel Oost + 3 housing corporations · published 12 sep

€1.4m committed · 4 milestones — 36% released

M1 · Fencing + site survey	PAID	€90k
M2 · Drains + water	PAID	€420k
M3 · Pavement + benches	LIVE	€680k
M4 · Planting + hoarding art	TENDER	€210k

12 quests under this project · 3 open now

Each milestone pays on proof and can be split into quests.

THE LARGEST LEGAL WALL IN THE CITY

A construction fence already has an owner. With consent, the mark goes there — plus a QR to the project page.

WITH THE OWNER'S CONSENT

11 — EVERY DEVICE, ONE INTERFACE

It has to work on the phone in a pocket.

One responsive web app, installable as a PWA. Same data on five classes of device — including the kiosk for people who carry none of them, and the TV in a community centre.

Phone first

Built at 360 px, thumb-reachable actions, one decision per screen. Works one-handed, in the rain, with gloves on.

Then everything else

Tablet split view for offers, desktop for the review queue, kiosk for the street, TV for the community centre. One codebase — no second app.

Cheap to load

Under 150 KB of initial JS, no autoplay video, asks queued offline and sent when the signal returns.

360 px → 4K

Phone
360–430 px · PWA install · camera capture

Tablet
split view · offers and evidence side by side

Desktop
1280 px+ · review queue, audits, exports

Kiosk
public screen · QR hands the quest to a phone

TV
any browser · what the street asks for, no login

Tested on a €120 Android phone, a five-year-old laptop and a 1080p TV before every release.

Warm on purpose, big on purpose.

Civic software usually looks like a form. This looks like a message from a neighbour: paper colour, big targets, one action per screen — and the number as the only logo.

ASK FOR SOMETHING | MAKE AN OFFER | IN ESCROW

€18 of €30 claimed

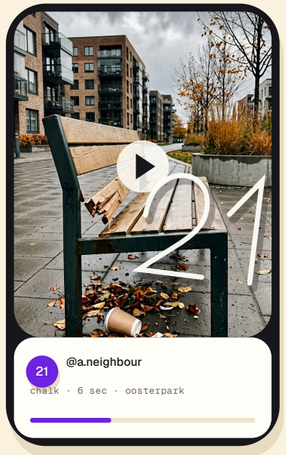

ONE NUMBER, NO LOGO

21 has to become a meme, not an ad.

One large PR agency on retainer, paid per published placement and per settled quest — not for impressions. The formats are cheap on purpose: a number, a phone, a wall, six seconds.

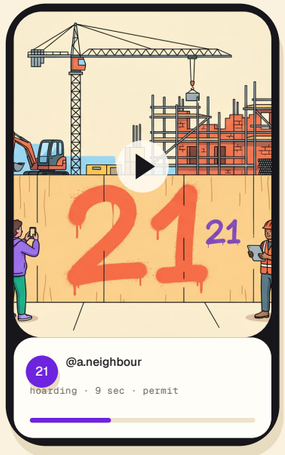

WHAT PEOPLE ACTUALLY FILM

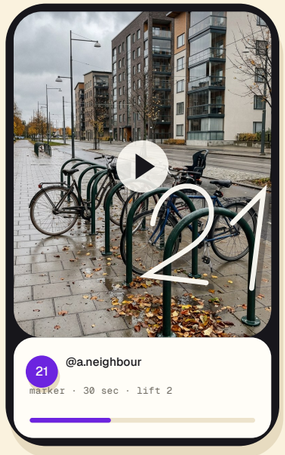

01 · CHALK, 6 SEC

02 · BEFORE / AFTER, 15 SEC

03 · THE HOARDING, 9 SEC

04 · FIND THE 21, 30 SEC

THE MEME IS THE MEDIA PLAN

A brand ages; a number doesn't. 21 looks like it was already there, which is why it fits the era without a caption explaining it.

TEN TEMPLATES · ONE NUMBER · NO EXPLANATION

We don't need it liked. We need it repeated.

ONE LARGE AGENCY, THREE JOBS · ABOVE THE FLOOR

01 **Buy reach by the unit**
20 creators per city, paid per published placement. Invoices public.

02 **Seed the format**
A six-second TikTok script, ten meme templates, the stencil in every caption.

03 **Hand it over**
City permissions, consented walls, a QR to the task page in every video.

WHAT WE COUNT

Settled quests
per 1,000 views, not CPM.

Marks we didn't pay for
photographed by strangers.

Cost per settled quest
published every month.

Reach is a means. A finished, paid quest is the only result.

GUARDRAILS

No paid engagement, no bots, no fake accounts, no astroturfed testimonials. Every creator discloses the fee.

The number travels without us. That is the point.

NO LOGO · NO SLOGAN · AT THE FLOOR: NO AGENCY

Nobody needs our permission to paint it.

A stencil, a sticker sheet, a six-line README, published under MIT and printed locally. That is the whole distribution strategy — with the campaign behind it.

IN THE KIT

01 An A4 stencil: two strokes, one cut, any colour.

02 A sticker sheet: twelve 21s, for broken things.

03 A chalk template for asphalt and one for a lift door.

04 A task-ticket template to photograph next to the mark.

05 A six-second vertical video script, with no speaking.

06 The rules on the first line of the sheet: ask the owner.

THREE WAVES

Wave 1 · month 1	three creators paid per placement; an agency and 20 creators above the floor.
Wave 2 · months 2–4	city permissions make walls legal; every settled quest posts its own before/after.
Wave 3 · months 4–6	groups we have never met print the sheet. The only metric we cannot buy.

WHAT WE WILL NOT DO

We don't pay for illegal paint, we don't instruct anyone to break a rule, and we don't claim ownership of a number. Consented walls get artists and fees; everything else is other people's art, at their own risk.

The kit is the campaign. The board is what makes it true.

The floor, in units.

€7,500 is the smallest round that moves: six months, one city, one person full-time. Every line is a unit price × a quantity, and the table adds up exactly.

THE FLOOR · SIX MONTHS, ONE CITY

€7,500

my wage, not a market rate

ABOVE THE FLOOR · SAME SPLIT AT ANY SIZE

45%	quest and project rewards in escrow
15%	consented walls, artists, materials
15%	PR and the kit
10%	verification and field ops
6%	safety, legal, insurance
5%	ops and infrastructure
4%	reserve

My hours do not take a share: they stay at cost. A smaller round ships fewer quests and walls — never cheaper ones.

LINE	UNIT	€
Code — protocol, PWA, contract, kit	250 ₹/h × 960 h AT COST	2,500
Quest rewards in escrow	€30 × 60	1,800
Consented walls — fee, paint, lift	€300 × 3	900
Verification and attestors	60 checks + panel	400
PR — creators, per placement	€100 × 3	300
Kit — stencil, stickers, chalk	€0.50 × 500	250
Safety, legal, insurance	at cost	400
Infrastructure	€25 × 6	150
Reserve	10.7%	800
The floor		**7,500**

At the floor there is no agency retainer: three creators, paid per published placement. Above it, wave 1 is an agency and 20 creators a city.

One floor, then scope.

The unit prices set the floor; the round sets the ceiling. These are the three shapes the programme takes, priced in scope — not in promises.

01 THE FLOOR · €7,500

One city, one board

- 60 quests, 3 consented walls
- A street project page + kiosk pilot
- Kit v1 under MIT
- 3 creators, no agency retainer
- 10 askers recruited by hand

SAME SOFTWARE · SAME ESCROW

02 ABOUT €30,000

Three cities, a real record

- 250 quests, 9 consented walls
- 2 projects: a street, a construction site
- Agency wave 1: 20 creators a city
- Verification panel + kiosk pilot
- Kit v1 in two languages

SAME SOFTWARE · SAME ESCROW

03 ABOUT €100,000

Nine cities, the whole campaign

- 900 quests, 21 consented walls
- 3 large projects, paid by milestone
- Kiosks in three cities
- A public export anyone can audit
- Kit v2 in three languages · PR waves 2–3

SAME SOFTWARE · SAME ESCROW

THE FLOOR IS ARITHMETIC

Every line is a unit price × a quantity. Below it we ship the kit, one city and the escrow contract — and say publicly that is what happened.

a floor, not a wish

Paid when it exists.

Shares, not sums: each milestone releases a fixed percentage of whatever the grant turns out to be. No milestone closes on a slide.

PAID WHEN IT EXISTS

MILESTONE	ACCEPTANCE CRITERION	SHARE
M1 — Month 1 — Board live + kit v1	1 city live: ask, offers, escrow, settlement. Kit v1 published. 10 quests done.	10%
M2 — Months 2-3 — 3 cities, 150 quests	150 quests completed, 7 consented walls, first dispute resolved in public.	30%
M3 — Months 3-4 — Public space + first project	Civic tasks live with attestors; 60 repairs settled; first project page (a street) with milestone escrow; kiosk pilot.	25%
M4 — Months 4-5 — 9 cities, 900 quests, 3 projects	900 quests, 21 consented walls, 3 large projects paid by milestone; 100% of walls with written consent.	25%
M5 — Month 6 — Kit v2 + open export	Everything exported, kit v2 under MIT, exhibition of the 21 walls.	10%

CUMULATIVE RELEASE

An unmet criterion means an unpaid milestone, not a renegotiation.

One person, and a phone full of strangers.

At the floor it is me, full-time, plus a paid curator and paid creators per city. The other two roles are the plan for a larger round — not people claimed as signed.

P

Protocol & product

contracts · escrow · app

Former active graffiti artist: a wall network across a dozen countries. Writes the Solidity contracts, the PWA capture flow and the kiosk build.

[name] · [github] — full time · 6 months

P

Programme lead

cities · walls · permissions

Runs the consented walls, the open calls and the consent paperwork with a paid curator in each city.

[name] · [linkedin] — at a larger round

F

Field ops & trust

attestors · disputes · safety

Recruits attestors, runs the dispute panel, and enforces the safety rules when a quest goes wrong in public.

[name] · [linkedin] — at a larger round

PR PARTNER · ABOVE THE FLOOR, ONE RETAINER

Creators, not ad inventory

A large agency places 20 creators per city on the number; we pay for reach the way we pay for paint — by the unit, invoice published. At the floor this card is empty: three creators, per placement.

CURATORS & CREATORS · PAID PER CITY

Never asked to work for visibility

Curator: shortlists artists, sits on the open call.

Creator: films the mark, names the city, keeps the fee.

Both on invoice. Both named in the close-out report.

OPEN ROLE, FUNDED BY TRANCHE 2

Verification & safety lead — runs reviewer panels in the pilot cities.

NOT APPLYING FOR

A marketing department, a token, an office.

Targets, not traction.

21 is pre-launch. These are the numbers we commit to publishing at close-out, with the raw registry export next to them.

GUARDRAILS — WE FAIL IF THESE MOVE THE WRONG WAY

0, ever	< 8% of quests	< 1% of released value	0
Off-escrow payments	Disputes	Fraud	Walls without consent

Floor targets; a larger round scales the same metrics to 250 and 900 quests, 9 and 21 paid walls. Targets for month six, not results.

What could go wrong, and what we do about it.

A meme and a marketplace fail differently. Both failure lists are written down before the first euro moves.

THREAT	WHY IT IS REAL	MITIGATION IN THE MVP
The mark gets hijacked	Anyone can paint 21, including people we would not choose.	We never claim ownership. The task page is the only canonical link, and the kit states the rules on its first line.
Illegal paint in our name	Stencils travel; walls have owners.	We never pay or instruct. Consented walls get artists and fees; the kit says ask first, in three languages.
A cold, empty board	An empty board attracts nobody, and the number stops meaning anything.	Seed three paid civic tasks per city and 20 askers recruited by curators, before any PR spend.
Two strangers meet	In-person quests carry real physical risk.	Public first meetings, ID above €50, panic button, no cash off-platform, one-tap report that pauses a profile.
Bad work, bad practice	An unsupervised therapist, a repair that fails in a week.	Category rules, supervised trainees only, a 14-day workmanship window, delisting after two upheld disputes.
Escrow bug	Contracts hold real money from day one.	Two audits before mainnet, invariant fuzzing, per-quest caps, 3-of-5 guardian pause with 48 h delay.

Open question for reviewers: what is the smallest proof that a stranger did the work — and how few clicks should it cost?

THE ASK

Bring a wall.

Bring a quest.

The floor is €7,500: six months, one city, one person, sixty quests, three walls. Whatever arrives above it is split the same way — quest and project rewards first, consented walls second, the kit always.
